ABSTRACT

The invention system is an automated system for creating, storing and using registration and itinerary records to provide security to participants. The system automatically monitors itinerary records and prompts the initiation of security response actions such as a telephone call to a participant provided contact person if a participant fails to cancel an itinerary prior to a stated itinerary completion time. The system is also able to receive payment and maintain a current payment status for the participant until a set time of expiration or until the participant fails to cancel an itinerary prior to a stated itinerary completion time.
